In January 2016, the Pennsylvania Turnpike Commission (PTC) opened its first cashless tolling location as part of the first phase of the $1.4 billion PA Turnpike/I-95 Interchange Project that directly connects the two highways, as required by federal legislation to make I-95 continuous from Maine to Florida.

The new tolling system required the beginning/end of the ticket system to be moved from the southeastern end of the Turnpike to just west of the I-95/PA Turnpike interchange location. The new, conventional mainline toll plaza with Express E-ZPass lanes was constructed at Neshaminy Falls (See map below) that is just east of the Bensalem Interchange.

To help fund the Interchange Project in part, an open road cashless tolling point was constructed, for westbound-traffic only, just after crossing the Delaware River. At this location, tolls are assessed electronically as vehicles pass under an overhead gantry at highway speed. Customers without E-ZPass are assessed tolls using the PA Turnpike TOLL BY PLATE program. No toll is charged for eastbound travelers.

In addition, tollbooths were removed at the Delaware Valley/U.S. Route 13 Interchange. It remains open to traffic with no toll.

Cash customers continuing west on the PA Turnpike are directed to stop at the Neshaminy Falls Toll Plaza to pick up a ticket (westbound) or pay their toll (eastbound). See page two for related article.
Neshaminy Falls Toll Plaza - Milepost 353
Cash and E-ZPass are accepted at the mainline toll plaza.

In 2016, this toll plaza replaced the Delaware River Bridge Toll Plaza as the new beginning/end of the PA Turnpike ticket system. Traveling eastbound at this location, cash customers stop and pay a toll; E-ZPass customers can use the two Express Lanes to the left or a dedicated E-ZPass lane on the right to exit the system.

Traveling westbound customers must stop and get a ticket at the lanes marked TICKETS. E-ZPass customers may pass at 55 mph via two Express Lanes to the left or via three standard 5 mph E-ZPass lanes to the right.
