Maintenance and Protection of Traffic Standards

January 2019
Change 1
MAINTENANCE AND PROTECTION OF TRAFFIC STANDARDS
LIST OF CHANGES
JANUARY 2019 EDITION – CHANGE NO. 1

The revisions for this new edition are listed below. It is strongly advised that all recipients thoroughly examine the changes and revisions incorporated into this new edition.

JANUARY 2019 EDITION, CHANGE NO. 1:

GENERAL NOTES - LEGEND
- Title was revised

GENERAL NOTES DEFINITIONS
- Truck Mounted Attenuators (TMA) definition was revised.

PTS 000 – GENERAL STANDARDS
- PTS 005 - Trailer-Mounted Equipment Placement - Note 2 was revised.

PTS 900 – STANDARDS FOR LONG-TERM MEDIAN WIDTHS GREATER THAN OR EQUAL TO 15 FEET
- PTS 900-6 - Lane Closure Traffic Pattern for Interchange and Service Plaza Areas Median Widths Greater Than or Equal to 15 Feet - Work zone hatching was removed from deceleration and acceleration lanes.

PTS 905 – STANDARDS FOR LONG-TERM MEDIAN WIDTHS LESS THAN 15 FEET
- PTS 905-6 - Lane Closure Traffic Pattern for Interchange and Service Plaza Areas Median Widths Less Than 15 Feet - Work zone hatching was removed from deceleration and acceleration lanes.
- PTS 905-8 - Stationary Shoulder Closure with Channelizing Devices Median Widths Less Than 15 Feet - Removed signs from the median.

PTS 910 – STANDARDS FOR SHORT-TERM MEDIAN WIDTHS GREATER THAN OR EQUAL TO 15 FEET
- PTS 910-1 - General Notes Median Widths Greater Than or Equal to 15 Feet – Removed R22-1 from Note 19.
- PTS 910-4 - Single Lane Traffic Pattern Median Widths Greater Than or Equal to 15 Feet – Revised Note 8.
- PTS 910-5 - Single Lane Traffic Pattern for 3 Lane Section Median Widths Greater Than or Equal to 15 Feet – Revised Notes 8 and 10.
- PTS 910-6 - Lane Closure Traffic Pattern for Interchange and Service Plaza Areas Median Widths Greater Than or Equal to 15 Feet - Work zone hatching was removed from deceleration and acceleration lanes.
- PTS 910-8 - Stationary Shoulder Closure with Channelizing Devices Median Widths Greater Than or Equal to 15 Feet – Removed Speed Limit sign from end of pattern.
- PTS 910-11 - Traffic Line Painting Operations Median Widths Greater Than or Equal to 15 Feet – Removed impact attenuator from the back of Shadow Vehicle No. 4 and No. 5 on PTS 910-11A and PTS 910-11B.

PTS 915 – STANDARDS FOR SHORT-TERM MEDIAN WIDTHS LESS THAN 15 FEET
- PTS 915-1 – General Notes Median Widths Less Than 15 Feet – Removed R22-1 from Note 19.
- PTS 915-4 – Single Lane Traffic Pattern Median Widths Less Than 15 Feet – Revised Note 8 and removed Note 10.
- PTS 915-5 – Single Lane Traffic Pattern for 3 Lane Section Median Widths Less Than 15 Feet – Revised Notes 8 and 11 and removed Note 10.
- PTS 915-6 – Lane Closure traffic Pattern for Interchange and Service Plaza Areas Median Widths Less Than 15 Feet - Work zone hatching was removed from deceleration and acceleration lanes.
- PTS 915-8 – Stationary Shoulder Closure with Channelizing Devices Median Widths Less Than 15 Feet – Revised Note 2, removed Note 7, removed Speed Limit sign from end of pattern, and removed median signs.
PTS 940 – STANDARDS FOR INTERCHANGE OPERATIONS
- PTS 940-8 - Advance Warning Signs for Work on Ramps – Provided option to use MPT-09 or MPT-11.
- PTS 940-11 – Two-Lane Ramp, One Lane Closure - Removed “500 FT Ahead” plaque from W4-2L / W4-2R sign.
- PTS 940-12 E-ZPass Only Slip Ramp - Removed “500 FT Ahead” plaque from W4-2L / W4-2R sign from PTS 940-12A and PTS 940-12B.
- PTS 940-13 – Express E-ZPass Lane Closure - Removed R22-1 sign from PTS 940-13A and PTS 940-13B.
- PTS 940-14 – Express E-ZPass Lane Closure - Median Width Less Than 15 Feet - Removed R22-1 sign from PTS 940-14A and PTS 940-14B.

APPENDIX A
- Added MPT-11 (Service Plaza Area Construction)
# Table of Contents

## General

General Notes - Legend

## PTS 000 – General Standards

- PTS 001: Maintenance and Protection of Traffic Milled Pavement Differential in Lane
- PTS 002: Maintenance and Protection of Traffic Binder Pavement Differential in Lane
- PTS 003: Maintenance and Protection of Traffic Pavement Differential on Right Shoulder
- PTS 004: Maintenance and Protection of Traffic Pavement Differential in Median Shoulder
- PTS 005: Trailer-Mounted Equipment Placement
- PTS 006: Inlet Delineation
- PTS 007: Traffic Pace / Stoppage

## PTS 900 – Long-Term Wide Median Standards

- PTS 900-1 Notes: General Notes
- PTS 900-2A: Mobile Operation for 2 Lanes – Right Lane and Shoulder Work Zone
- PTS 900-2B: Mobile Operation for 2 Lanes – Left Lane and Median Work Zone
- PTS 900-3A: Mobile Operation for 3 Lanes – Right and Center Lane Work Zone
- PTS 900-3B: Mobile Operation for 3 Lanes – Left and Center Lane Work Zone
- PTS 900-4: Single Lane Traffic Pattern
- PTS 900-5: Single Lane Traffic Pattern for 3 Lane Section
- PTS 900-6: Lane Closure Traffic Pattern for Interchange and Service Plaza Areas
- PTS 900-7: Mobile Shoulder Operation
- PTS 900-8: Stationary Shoulder Closure with Channelizing Devices
- PTS 900-9: Stationary Shoulder Closure with Temporary Concrete Barrier
- PTS 900-10A: Lanes Narrow Detail – 2 Lanes Narrow (W ≤ 2.5 FT. and A < 24 FT.)
- PTS 900-10B: Lanes Narrow Detail – 3 Lanes Narrow (W ≤ 3.75 FT. and A < 36 FT.)
- PTS 900-11A: Lanes Shift Detail – 2 Lanes Shift (W > 2.5 FT. and A = 24 FT.)
- PTS 900-11B: Lanes Shift Detail – 3 Lanes Shift (W > 3.75 FT. and A = 36 FT.)
- PTS 900-12A: Emergency Pull-Off – Type I in Temporary Concrete Barrier
- PTS 900-12B: Emergency Pull-Off – Type III
- PTS 900-12C: Opening in Temporary Concrete Barrier for Access to Construction Area
- PTS 900-12D: Combined Emergency Pull-Off – Type I and Opening in Temporary Concrete Barrier for Access to Construction Area
- PTS 900-13: Opening in Temporary Concrete Barrier with Truck Crossing
- PTS 900-14: 3 Lane to 2 Lane Long-Term Lane Closure
- PTS 900-15: Crossover Traffic Pattern

## PTS 905 – Long-Term Narrow Median Standards

- PTS 905-1 Notes: General Notes
- PTS 905-2A: Mobile Operation for 2 Lanes – Right Lane and Shoulder Work Zone
- PTS 905-2B: Mobile Operation for 2 Lanes – Left Lane and Median Work Zone
- PTS 905 3A: Mobile Operation for 3 Lanes – Right and Center Lane Work Zone
- PTS 905-3B: Mobile Operation for 3 Lanes – Left and Center Lane Work Zone
- PTS 905-4: Single Lane Traffic Pattern
- PTS 905-5: Single Lane Traffic Pattern for 3 Lane Section
### Table of Contents

| PTS 905-6: Lane Closure Traffic Pattern for Interchange and Service Plaza Areas |
| PTS 905-7: Mobile Shoulder Operation |
| PTS 905-8: Stationary Shoulder Closure with Channelizing Devices |
| PTS 905-9: Stationary Shoulder Closure with Temporary Concrete Barrier |
| PTS 905-10A: Lanes Narrow Detail – 2 Lanes Narrow (W < 2.5 FT. and A < 24 FT.) |
| PTS 905-10B: Lanes Narrow Detail – 3 Lanes Narrow (W < 3.75 FT. and A < 36 FT.) |
| PTS 905-11A: Lanes Shift Detail – 2 Lanes Shift (W > 2.5 FT. and A = 24 FT.) |
| PTS 905-11B: Lanes Shift Detail – 3 Lanes Shift (W > 3.75 FT. and A = 36 FT.) |
| PTS 905 12A: Miscellaneous Details – Emergency Pull–Off Type I in Temporary Concrete Barrier |
| PTS 905 12B: Emergency Pull–Off – Type III |
| PTS 905-12C: Opening in Temporary Concrete Barrier for Access to Construction Area |
| PTS 905-12D: Combined Emergency Pull–Off – Type I and Opening in Temporary Concrete Barrier for Access to Construction Area |
| PTS 905-13: Opening in Temporary Concrete Barrier with Truck Crossing |
| PTS 905-14: 3 Lane to 2 Lane Long Term Closure |
| PTS 905-15: Crossover Traffic Pattern |
| PTS 905-16: Tunnel Crossover Pattern |

### PTS 910 – Short-Term Wide Median Standards

| PTS 910-1 Notes: General Notes |
| PTS 910-2A: Mobile Operation for 2 Lanes – Right Lane and Shoulder Work Zone |
| PTS 910-2B: Mobile Operation for 2 Lanes – Left Lane and Median Work Zone |
| PTS 910-3A: Mobile Operation for 3 Lanes – Right and Center Lane Work Zone |
| PTS 910-3B: Mobile Operation for 3 Lanes – Left and Center Lane Work Zone |
| PTS 910-4: Single Lane Traffic Pattern |
| PTS 910-5: Single Lane Traffic Pattern for 3 Lane Section |
| PTS 910-6: Lane Closure Traffic Pattern for Interchange and Service Plaza Areas |
| PTS 910-7: Mobile Shoulder Operations |
| PTS 910-8: Stationary Shoulder Closure with Channelizing Devices |
| PTS 910-9: Survey Work Along Shoulder |
| PTS 910-10: Utility Work Along Shoulder |
| PTS 910-11A: Traffic Line Painting Operation – Right Lane |
| PTS 910-11B: Traffic Line Painting Operation – Left Lane |

### PTS 915 – Short-Term Narrow Median Standards

| PTS 915-1 Notes: General Notes |
| PTS 915-2A: Mobile Operation for 2 Lanes – Right Lane and Shoulder Work Zone |
| PTS 915-2B: Mobile Operation for 2 Lanes – Left Lane and Median Work Zone |
| PTS 915-3A: Mobile Operation for Three Lanes – Right and Center Lane Work Zone |
| PTS 915-3B: Mobile Operation for Three Lanes – Left and Center Lane Work Zone |
| PTS 915-4: Single Lane Traffic Pattern |
| PTS 915-5: Single Lane Traffic Pattern for 3 Lane Section |
| PTS 915-6: Lane Closure Traffic Pattern for Interchange and Service Plaza Areas |
| PTS 915-7: Mobile Shoulder Operations |
| PTS 915-8: Stationary Shoulder Closure with Channelizing Devices |

### Appendix

| Appendix A: | Sign Index in Nomenclature Order |
Pennsylvania Turnpike Commission (PTC) Maintenance and Protection of Traffic Standards applies to contractors; utilities; Federal, State, County, and Municipal governments; and others performing construction, maintenance, emergency, permit work, utility work, or any other type of work on highway or so closely adjacent to a highway that workers, equipment, or materials encroach on the roadway or interfere with the normal movement of traffic. This also includes any special event that necessitates the need for temporary traffic control. Refer to 67 Pa Code §212.402 for a complete list of types of work that are exempt from the requirements contained in this standard and the Manual on Uniform Traffic Control Devices (MUTCD).

The PTC Maintenance and Protection of Traffic Standard drawings mentioned hereafter will be referenced as PTS (Example: PTS 910-7).

PTC Maintenance and Protection of Traffic Standards have precedence over information found in PennDOT Publication 213 and the MUTCD. Furthermore, the PTS drawings shall be utilized in lieu of a Publication 213 or MUTCD Typical Application drawing when roadway conditions are similar (For example PTS 900-3, PTS 905-3, PTS 910-3, and PTS 915-3 would have precedence over PATA 306, PATA 603, and MUTCD TA-35 for a mobile operation on a multi-lane highway). PTS Applications (000 series) are general in nature and meant to be a possible component of temporary traffic control zones shown in most PTS drawings (900 through 940 series). Multiple PTS drawings (900-940 series) may be combined to create a customized temporary traffic control zone, however, customized traffic control setups shall be approved by the PTC prior to implementation. Install traffic control devices as shown on an approved customized traffic control plan if a PTS, Publication 213, or MUTCD Typical Application drawing does not apply.

The traffic control schemes shown in this standard are normally applicable for both urban and rural areas. Since it is not practical to provide detailed guidelines for all the situations that may conceivably arise, applications are presented for only the most common situations. These are minimum desirable applications for normal situations, and additional protection may be needed when special complexities or potential hazards prevail. The protection prescribed for each situation shall be consistent with the general provisions found in the most recent editions of 67 Pa Code, Chapter 212, Official Traffic Control Devices and the MUTCD as issued by the Federal Highway Administration and should be based on common sense; engineering judgment; the speed and volume of traffic; the duration of the operation; the exposure to potential hazards; the physical features of the highway including horizontal alignment, vertical alignment, and the presence of intersections and driveways; and other important factors.
**General Notes Definitions (Page 1 of 2)**

Buffer Zone - Area that separates traffic flow from the work zone. Buffer zones must remain clear of equipment, vehicles, workers, and materials. The length of longitudinal buffer zone is defined on the PTS figures and may be increased for downgrades or other conditions that affect stopping sight distance.

- Longitudinal buffer zone is located in advance of and after the work zone.
- Lateral buffer zone is located between flowing traffic and the work area.

Long-Term – Work that occupies a location for more than 12 hours for more than three (3) consecutive days.

Mobile Operation - An operation where the work zone beginning and ending points move as the work activity moves. Work that moves intermittently or continuously for up to 24 hours.

PATA (Pennsylvania Typical Application) - Drawings within PennDOT Publication 213 that depict temporary traffic control conditions.

Portable Sign Post - Rigid device with steel posts for mounting temporary traffic control devices where minimum mounting heights of at least 5' are required. Refer to PennDOT Publication 111, Traffic Control – Pavement Markings and Signing Standards TC-8717, for details.

Portable Sign Support - A folding, collapsible, or telescoping device for posting temporary traffic control devices where minimum mounting heights of 1' are acceptable.

Roadway - That portion of a highway improved, designed, or ordinarily used for vehicular travel, exclusive of the sidewalk, berm, or shoulder.

Runout - Length of the taper of a series of channelizing devices for the purpose of moving into the normal path. Located immediately after the end of the work zone.

Shadow Vehicle - A vehicle positioned within the activity in advance of the work zone and work vehicles. The primary purpose of the shadow vehicle is to provide advance information to approaching drivers while protecting workers and work vehicles. Shadow vehicles without a truck mounted attenuator must be a 33,000 lb GVW (Gross Vehicle Weight) or larger vehicle and loaded to weigh a minimum of 22,000 lbs., or as indicated on the Standard Drawings, in addition to meeting the requirements of PennDOT Publication 212. Vehicle must be equipped with a flashing, oscillating, or revolving amber warning light which is visible from any direction (360° visibility) and is not being used as a work vehicle. The amber warning light must be activated within an active work zone.

Short-Term - Work that occupies a location for less than 12 hours for three (3) or less consecutive days.

Shoulder - The part of a highway adjacent to the roadway which has a surface constructed with the same or similar material as the roadway. Shoulder width is measured from the center of the painted edge line to the outside edge of pavement, concrete, or finished surface.

Taper - A series of channelizing devices and/or paint lines installed for the purpose of moving traffic out of or into the normal path. Various taper types have differing minimum lengths, most of which are based upon an 'L' distance. The formula to determine distance L is shown on the corresponding PTS notes page. It should be noted that the taper length is a distance per lane; so if a single taper covers two lanes, the total taper length will be double the calculated or minimum distance.

- Merging Taper - Used when drivers in multiple lanes are required to merge into a common road space. Minimum length is L.
- Shifting Taper - Used when a lateral shift is needed. Minimum length required is distance 1/2 L, unless traffic is approaching a one-lane, two-way condition; in this case the minimum length is 50’.
- Shoulder Taper - Required when closing a paved shoulder having a width of 8’ or more; optional in other conditions. Minimum length is 1/3 L, unless traffic is approaching a one-lane, two-way condition; in this case the minimum length is 25’.
- Downstream Taper - Used in the termination area to provide a visual cue to the driver that access is available back into the original lane or path that was closed. Minimum distance is 50’ per lane.

Truck Mounted Attenuators (TMA) - Shall be mandatory for placement on shadow vehicles, as indicated on the standard details. When a TMA is used, the weight of the shadow vehicle must be greater than the minimum weight specified by the TMA manufacturer.

Warning Lights – Yellow, White or Red lights that operate in steady burn or flashing mode. Warning lights on authorized vehicles may flash or revolve. Type A, B, C, and D warning lights are portable, powered, lens-directed enclosed lights.
Worker - A person on foot whose duties place him or her within the right-of-way of a highway, such as highway construction and maintenance forces, survey crews, utility crews, responders to incidents, and law enforcement personnel when directing traffic, investigating crashes, and handling lane closures, obstructed roadways, and disasters within the right-of-way of a highway.

Work Vehicle - A vehicle available for use by workers within an activity area. All work vehicles shall be located outside of the buffer space and roll ahead space for shadow vehicles. Work vehicles being used in an active work zone must utilize the flashing, oscillating, or revolving amber warning lights which are visible from any direction (360° visibility).

Work Zone - The area of a highway where construction, maintenance, or utility work activities are being conducted, and in which traffic control devices are required in accordance with Title 67, Chapter 212.
General Notes - Legend
for Pennsylvania Turnpike Commission Standard Details

Work Zone
Buffer Zone (No vehicles, equipment, material or workers in this area)
Milled pavement

General Standards

(PTS 000 Series)
PTS 001
Maintenance and Protection of Traffic
Milled Pavement Differential in Lane

NOTES:
1. Completely cover conflicting signs and turn off PCMS when the milled pavement is within a closed lane.
2. See Appendix A for sign descriptions and sizes.

Provide a paved 1 inch per foot wedge to remove vertical drop-off at the entrances and exits to interchanges, service plazas, maintenance sheds, and access ramps for the full length of the ramps.

Location as directed by the Representative

Interchange, service plaza, maintenance shed, or access ramp

Place at 1/2 mile intervals through pavement differential

Place at 1 mile intervals through pavement differential

Phase 1
Motorcycles use caution
Right / Left Lane Milled

Phase 2
Uneven Lanes
Next XX miles
Stay in Lane

Phase 1
PCMS 2

Phase 2
PCMS 1

JANUARY 2019
NOTES:
1. Completely cover conflicting signs and turn off PCMS when the low pavement is within a closed lane.
2. See Appendix A for sign descriptions and sizes.
PTS 003
Maintenance and Protection of Traffic
Pavement Differential on Right Shoulder

NOTES:
1. Completely cover conflicting signs and turn off PCMS when the low pavement is within a closed lane or shoulder.
2. See Appendix A for sign descriptions and sizes.

JANUARY 2019
**PTS 004**

**Maintenance and Protection of Traffic**

**Pavement Differential in Median Shoulder**

**NOTES:**
1. Completely cover conflicting signs and turn off PCMS when the low pavement is within a closed lane or shoulder.
2. See Appendix A for sign descriptions and sizes.

**JANUARY 2019**
1. Clear Zone width in feet is shown on the table below.

2. Delineation with channelizing devices is required for trailer-mounted equipment located within the clear zone, except when protected by guide rail or barrier. Cones may be used if the trailer will remain in place for less than 24 hours. Vertical panels shall be used when the trailer will be in place for more than 24 hours.

3. Place trailers in the safest locations that will provide maximum performance. The trailer hitch shall be on the opposite side of traffic approaching in the nearest lane as shown on the drawings.

4. Placement and delineation requirements apply to all trailer-mounted equipment such as Portable Changeable Message Signs (PCMS), Speed Display Trailer, Portable Cameras, etc.

5. PCMS shown on drawings; applicable to all trailer-mounted equipment.

PTS 005
Trailer-Mounted Equipment Placement

Most Preferred
Trailer Placed Behind Existing Guide Rail or Barrier or Outside Clear Zone Where Existing Guide Rail or Barrier is Not Available Delineation Not Required

Where Guide Rail or Barrier Is Not Available Trailer Placed Off Shoulder, But Within Clear Zone Delineation Is Required

Least Preferred Trailer Placed On Shoulder Delineation Is Required

Delineation Layout Detail for Trailer Placed Within the Clear Zone
1. If a ramp entrance is between Shadow Vehicle No. 1 and Shadow Vehicles No. 3 and No. 4, install Portable Changeable Message Sign (PCMS) prior to toll plaza with the message displaying the same as Shadow Vehicle No. 1. Provide necessary number of shadow vehicles on ramp (shown as Shadow Vehicle No. 2) to completely block ramp and prevent road users from driving between shadow vehicles.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1.

3. Position shadow vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels are to be truck mounted.

6. Shadow Vehicle No. 1 may not be located on the median shoulder.

7. All queued traffic shall be cleared and any succeeding traffic pace/stoppage shall not occur until traffic flow has returned to normal pre pace/stoppage conditions.
PTS 007
Traffic Pace / Stoppage

No traffic past this point while work is in progress

Pennsylvania State Police vehicle (Optional)

Shadow Vehicle No. 3 (See Note 6)

PHASE 2
STOPPED TRAFFIC AHEAD
BE PREPARED TO STOP

Shadow Vehicle No. 1 (See Note 1 and 6)

PCMS 1

JANUARY 2019
Standards for Long-Term Median Widths Greater Than or Equal to 15 Feet

(PTS 900 Series)
1. Remove all traffic control signs and devices immediately upon the completion of the work unless otherwise specified in the special provisions.

2. Place all traffic control devices and have them inspected by the Representative before work begins.

3. Cover or remove from the site all signs not in use. Remove from the Turnpike right-of-way construction signs not needed or used for a period of two (2) or more weeks.

4. Maintain a minimum spacing of 200 feet between all regulatory, warning and destination signs.

5. Provide at minimum a 40 feet width beyond the edge of the travel lane free of obstacles and drop-offs greater than 2 inches in depth in work zone(s) during non-working hours or separate work zone(s) from motorists with temporary concrete barrier. Separation of work zone(s) is incidental to the MPT.

6. Details for the signs and devices can be found in these drawings, PennDOT Publication 236, PennDOT Publication 212 and are to be manufactured by a Department of Transportation approved manufacturer as listed in PennDOT Publication 35.

7. Use PennDOT approved Type XI reflectorized material for signs. Do not use metal or wood signs in median.

8. These plans are not intended to relieve the contractor of the responsibility for the protection of the public and the construction personnel. The standards prescribed are minimum and additional protection may be needed if problems are encountered during the term of the contract. The contractor will be expected to constantly review this plan for adequacy and to recommend changes for the Representative's approval when inadequacies are discovered.

9. Signs and devices may be adjusted to fit field conditions.

10. Concrete barrier details are to be according to PennDOT Standards for Roadway Construction, RC-57M, RC-59M, and PTC Standards for Roadway Construction.

11. Establish work zone speed limit of 55 MPH in all construction zones.

Establish work zone speed limit by installing 55 MPH work zone speed limit signs in median and shoulder 1/2 mile in advance of construction area access openings and truck crossings as shown on PTS 900-12C, PTS 900-12D, and PTS 900-13.

Establish work zone speed limit of 55 MPH when a pavement differential exists between any of the lanes.

Normal posted speed limit signs within 2 mile advanced signing area for work zones are to remain uncovered.

Cover or remove work zone speed limit signs when all normal lanes and all normal median and shoulder are available for the affected direction(s). Cover or remove work zone speed limit signs when temporary concrete barrier closes the median or shoulder.

12. Vehicles, equipment, material and workers are not to be located in the buffer zone.

13. Post the G20-2 (END ROAD WORK) sign and the normal speed limit for the area (55 MPH or 70 MPH) at the end of the work zone. If the physical work zone is followed by another physical work zone within 2 miles, then G20-2 sign is not to be used and the R2-1 sign at the end of the first work zone is to be 55 MPH.

14. Type B light is to be mounted on the side closest to traffic as shown on PTS 980 (Sheet 30 of 32).

15. Existing R2-2-2, "WORK ZONE SPEED LIMIT 55 MPH", signs may only be used for the remainder of their serviceable life.

16. Type B yellow flashing warning lights may be used in conjunction with warning signs, unless otherwise indicated on the drawings.

17. Use only for wide median areas greater than or equal to 15 feet in width. Median width is defined as the distance between the yellow edge lines for the opposing travel lanes. Refer to PTS 905 details for narrow median areas less than 15 feet in width.

18. If work zone, including advance signing area, includes median widths of both less than 15 feet and greater than 15 feet, follow PTS 905 details for entire work zone.
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 2. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 900-8.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicle No. 1 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.
PTS 900-2A
Mobile Operation for 2 Lanes - Right Lane and Shoulder Work Zone
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 900-2 - Notes for applicable notes to this drawing

(See Note 7)

NOTES:
See PTS 900-2 - Notes for applicable notes to this drawing

JANUARY 2019
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicles No. 3 and 6. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 900-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicles No. 1 and 2.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from diving in between, based on field conditions.

7. Shadow Vehicles No. 1 and 2 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.
PTS 900-3A
Mobile Operation for 3 Lanes - Right and Center Lane Work Zone
Median Widths Greater Than or Equal to 15 Feet

Work Vehicle(s)

250' Min - 350' Max

250' Min - 500' Max

300' Min - 500' Max

300' Min - 1,000' Max

1,000' Min - 2,500' Max

NOTES:
See PTS 900-3 - Notes for applicable notes to this drawing

JANUARY 2019
1. For interchange and service plaza ramp signing within the work zone, see PTS 900-6.

2. For left lane work zone, use the same sign spacing, location, and pattern but with the signs and PCMS indicating a left lane closure.

3. Use channelizing devices with PennDOT approved sequential warning lights in the transition area for patterns used during hours of darkness.

4. Establish single lane traffic pattern only during active work periods. Shorten length of single lane pattern to only the length needed for construction operation. Work zone should not exceed four (4) miles in length.

5. Single lane should be established a minimum of 1,000 feet in advance of deceleration ramp or beyond acceleration ramp at interchanges and service plazas.

6. Install W3-5 sign only in the areas where the normal speed limit is 70 MPH.

7. Cover the Active Work Zone When Flashing (W21-19) sign and deactivate white Type B light when workers are not present on the roadway, berm, or shoulder for 60 minutes.

8. Speed Display Sign shall only be used if the length of the physical work zone is greater than or equal to 500 feet.

9. Compute the minimum desirable taper length for reduction in lanes using the following formula:

   \[ L = S \times W \]

   Where
   - \( L \) = Minimum desirable taper length in feet
   - \( W \) = Width of offset in feet
   - \( S \) = Normal speed limit in miles per hour

PTS 900-8 - Notes

Stationary Shoulder Closure with Channelizing Devices
Median Widths Greater Than or Equal to 15 Feet

1. Arrow panel in caution mode to be used when vehicles, equipment, materials, or workers are on the paved shoulder. Channelizing devices to remain in place until work is completed. Maintain normal traffic. Stationary shoulder closure with channelizing devices only permitted during allowable working hours.

2. For median operations where the median shoulder is less than 12 feet wide, use Single Lane Traffic Pattern per PTS 900-4, left lane closed. Single lane traffic pattern to remain in place until work is completed.

3. For left shoulder work zone in wide median areas use the same sign spacing, location, and pattern but with the signs indicating a left shoulder closure. Install signs in the median and right shoulder.

4. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

5. All arrow panels are to be truck mounted.

6. Have all shadow vehicles meet PennDOT and PTC requirements.

7. Cover the Active Work Zone When Flashing (W21-19) sign and deactivate white Type B light when workers are not present on the roadway, berm, or shoulder for 60 minutes.

JANUARY 2019
PT5 900-9 - Notes
Stationary Shoulder Closure with Temporary Concrete Barrier
Median Widths Greater Than or Equal to 15 Feet

1. For left shoulder work zone in areas with a median greater than 15 feet use the same sign spacing, location, and pattern but with the signs indicating a left shoulder closure. Install signs in the median and right shoulder.

2. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-135 or barrier, or tapering barrier and provide temporary impact attenuator.

3. For multiple stationary shoulder closures with temporary concrete barrier located within 1 mile of each other, install advanced signing prior to the first stationary shoulder closure only, with distance displayed on the MPT-31 sign as the length from the beginning of the first stationary shoulder closure to the end of the last stationary shoulder closure. The G20-2 sign is to be installed after the last stationary shoulder closure.

4. MPT-31 sign shall only be used if the length of the work zone is greater than 1 mile.

5. If the length of the work zone is greater than 1 mile and no construction accesses are active, provide G20-5AP / R2-1 signs to the right of traffic 1,500 feet before the beginning of the temporary concrete barrier and at 1 mile intervals throughout the shoulder closure.

6. Completely cover signs used with the pattern when the right lane is closed to traffic per PTS 900-4 or PTS 900-5

**Signs**

- **G20-2**: End Road Work
- **MPT-31**: No Shoulder Next... Miles
- **R22-1**: Road Work Ahead
- **W20-1**: Work Zone
- **W21-5BR**: Right Shoulder Closed

**NOTE**: See Appendix A for sign descriptions and dimensions.

PTS 900-9
Stationary Shoulder Closure with Temporary Concrete Barrier
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 900-9 - Notes for applicable notes to this drawing

JANUARY 2019
PTS 900-10 - Notes
Lanes Narrow
Median Widths Greater Than or Equal to 15 Feet

1. Use the two lane detail when \( W \leq 2.5 \) FT. and \( A < 24 \) FT. Use the three lane detail when \( W \leq 3.75 \) FT. and \( A < 36 \) FT.

2. When lanes narrow within a work zone use only W5-4-1(1000') and W5-4-1 (500').

3. Provide emergency pull-offs at a spacing of approximately 1 mile each direction through work zone when full 12 feet of shoulder is not available.

4. Taper 30:1 to outside edge of paved shoulder. From outside edge of paved shoulder, taper as per RC-57M. When lanes narrow to the right and a full taper is not feasible in median, then see Note 5.

5. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-135 or barrier, or tapering barrier and provide temporary impact attenuator.

6. From this point, provide G20-5AP / R2-1 signs to the right of traffic at 2 mile maximum intervals through the narrow lane(s) pattern.

7. Erect the Active Work Zone When Flashing (W21-19) sign and active white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not in use for 60 minutes.

8. MPT-31 sign shall only be used if the length of the work zone is greater than 1 mile.

9. Speed Display Sign shall only be used if the length of the physical work zone is greater than or equal to 500 feet.

10. Compute the minimum desirable transition / shift length for reduction in lanes using the following formula.

\[
L = S_{\text{WZ}} \times W
\]

where:
- \( L \) = Minimum desirable transition/shift length in feet
- \( W \) = Width of offset in feet
- \( S_{\text{WZ}} \) = Work Zone speed limit in miles per hour

PTS 900-10A
Lanes Narrow Detail - 2 Lanes Narrow (W ≤ 2.5 FT. and A < 24 FT.)
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 900-10 - Notes for applicable notes to this drawing

JANUARY 2019
PTS 900-10B
Lanes Narrow Detail - 3 Lanes Narrow (W ≤ 3.75 FT. and A < 36 FT.)
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 900-10 - Notes for applicable
notes to this drawing

JANUARY 2019
1. Use the two lane detail when \(W > 2.5\) FT. or \(W < 2.5\) FT. and \(A = 24\) FT. Use the three lane detail when \(W > 3.75\) FT. and \(A = 36\) FT. Shift traffic prior to and after work zone.

2. When lanes shift to the right, replace either W1-4BL with W1-4BR or W1-4CL with W1-4CR.

3. W24-1AL and W24-1AR signs may be used in lieu of the W1-4BL and W1-4BR signs when the tangent distance for the shifted traffic makes it difficult to install a second set of two lane reverse curve signs (W1-4B series). W24-1BL and W24-1BR signs may be used in lieu of the W1-4CL and W1-4CR signs when the tangent distance for the shifted traffic makes it difficult to install a second set of three lane reverse curve signs (W1-4C series).

4. Provide emergency pull-offs at a spacing of approximately 1 mile each direction through work zone when full shoulder is not available.

5. Taper 30:1 to outside edge of paved shoulder. From outside edge of paved shoulder, taper as per RC-57M. If full taper is not feasible in median, then see Note 6.

6. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-135 or barrier, or tapering barrier to provide temporary impact attenuator.

7. From this point, provide G20-5AP / R2-1 signs to the right of traffic at 2 mile maximum intervals through the lane (s) shift pattern.

8. Erect the Active Work Zone When Flashing (W21-19) sign and activate white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not in use for 60 minutes.

9. MPT-31 sign shall only be used if the length of the work zone is greater than 1 mile.

10. Speed Display Sign shall only be used if the length of the physical work zone is greater than or equal to 500 feet.

11. Compute the minimum desirable transition / shift length for reduction in lanes using the following formula.

   \[
   L = S_{\text{wz}} \times W
   \]

   \(L\) = Minimum desirable transition/shift length in feet

   \(W\) = Width of offset in feet

   \(S_{\text{wz}}\) = Work Zone speed limit in miles per hour

6. Show the actual distance, based on field conditions, on the sign.

7. Close construction openings with temporary concrete barrier when not required for more than two weeks. This work is incidental to the MPT.

8. Location subject to approval by Representative.

9. Station flagger at access points when access area is active. Equip flagger with PennDOT approved, like new, stop/ slow paddle with entire “STOP” panel covered. Provide a platform as necessary to allow the flagger to view oncoming traffic.

10. PCMS is incidental to MPT.

11. Post G20-2 sign at the end of the final work zone.

12. When combined area is not in use for construction access for 60 minutes, place channelizing devices as shown to completely close off access to the construction area, cover W25-5, G20-2, G20-5AP/R2-1, W21-19, and W21-20 turn off Type B light, and turn off PCMS.

**Signs**

**NOTE:** See Appendix A for sign descriptions and dimensions.
1. Close construction openings with temporary concrete barrier when not required for more than two weeks. This work is incidental to the MPT.

2. All lanes of traffic at Light Plant 1 location must be visible to flagger and unobstructed for a distance of 2,000 feet. Location subject to approval by Representative.

3. Station flagger with light plant illuminating the flagger 150 feet in advance of access points when truck crossing is active. Flagger shall be in constant communication with any vehicles using truck crossing. Equip flagger with PennDOT approved, like new, stop/slow paddle with entire "STOP" panel covered. Provide a platform as necessary to allow the flagger to view oncoming traffic.

4. PCMS is incidental to MPT.

5. Post G20-2 sign at the end of the final work zone.

6. Provide a light plant 2000 feet in advance of flagger for truck crossings active during hours of darkness. Light plant shall illuminate travel lanes at this location, but shall not be directed at oncoming traffic.

7. Rock construction entrances shall be placed at both sides of the roadway as shown. Additional rock to maintain the rock construction entrances shall be stockpiled on site. Rock construction entrance not required if paved surface is present.

8. When truck crossing is not in use for 60 minutes, place channelizing devices as shown to completely close off the access points, cover MPT-36, G20-2, G20-5AP/R2-1, W21-19, and W21-20 turn off Type B lights, and turn off PCMS.

9. Truck crossings to be active only during allowable working hours and during satisfactory weather conditions as determined by the Representative. Truck crossings are not permitted to be active during holiday periods.

**Signs**

NOTE: See Appendix A for sign descriptions and dimensions.
PTS 900-13
Opening in Temporary Concrete Barrier with Truck Crossing
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 900-13 - Notes for applicable notes to this drawing

JANUARY 2019
1. For left lane work zone, use the same sign spacing, locations, and pattern but with the signs and PCMS indicating a left lane closure.

2. Provide emergency pull-offs at a spacing of approximately 1 mile each direction through work zone when full right shoulder is not available.

3. Remove conflicting white line between the center lane and right lane for a right lane closure or the left lane and center lane for a left lane closure.

4. Taper 30:1 to outside edge of paved shoulder. From outside edge of paved shoulder, taper as per RC-57M.

5. Provide proper end treatment for barrier by tapering barrier and burying, tapering barrier and connecting to guide rail per PTS-135 or barrier, or taper barrier and provide temporary impact attenuator.

6. From this point, provide G20-5AP / R2-1 signs to the right of traffic at 2 mile maximum intervals through the long term lane closure pattern.

7. Erect the Active Work Zone When Flashing (W21-19) sign and active white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not in use for 60 minutes.

**Signs**

![Signs Diagram](image)

NOTE: See Appendix A for sign descriptions and dimensions.

PTS 900-14
3 Lane to 2 Lane Long-Term Lane Closure
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 900-14 - Notes for applicable notes to this drawing
1. Provide sufficient Type III barricades to close off the entire road.

2. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-135 or barrier, or tapering barrier and provide temporary impact attenuator.

3. Use channelizing devices with PennDOT approved sequential warning lights in the transition areas for patterns used during hours of darkness.

4. Single lane should be established a minimum of 1,000 feet in advance of deceleration ramp or beyond acceleration ramp at interchanges and service plazas.

5. For interchanges and service plaza ramp signing within the work zone, see PTS 900-6.

6. From this point, provide G20-5AP/ R2-1 signs to the right of traffic at 2 mile maximum intervals through the crossover traffic pattern.

7. Erect the Active Work Zone When Flashing (W21-19) sign and activate white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not used for 60 minutes.

Lane Shift Variables:
\[ L_1 = S \times W \]
\[ L_2 = \frac{S_{WZ}}{W} \times W \]
\[ L = \text{Minimum desirable transition/shift length in feet} \]
\[ W = \text{Width of offset in feet} \]
\[ S_{WZ} = \text{Work Zone speed limit in miles per hour} \]

SEE PTS 900-15 (Drawing 2 of 3)

JANUARY 2019
Standards for Long-Term Median Widths Less Than 15 Feet

(PTS 905 Series)
1. Remove all traffic control signs and devices immediately upon the completion of the work unless otherwise specified in the special provisions.

2. Place all traffic control devices and have them inspected by the Representative before work begins.

3. Cover or remove from the site all signs not in use. Remove from the Turnpike right-of-way construction signs not needed or used for a period of two (2) or more weeks.

4. Maintain a minimum spacing of 200 feet between all regulatory, warning and destination signs.

5. Provide at minimum a 40 feet width beyond the edge of the travel lane free of obstacles and drop-offs greater than 2 inches in depth in work zone(s) during non-working hours or separate work zone(s) from motorists with temporary concrete barrier. Separation of work zone(s) is incidental to the MPT.

6. Details for the signs and devices can be found in these drawings, PennDOT Publication 236, PennDOT Publication 212 and are to be manufactured by a Department of Transportation approved manufacturer as listed in PennDOT Publication 35.

7. Use PennDOT approved Type XI reflectorized material for signs.

8. These plans are not intended to relieve the contractor of the responsibility for the protection of the public and the construction personnel. The standards prescribed are minimum and additional protection may be needed if problems are encountered during the term of the contract. The contractor will be expected to constantly review this plan for adequacy and to recommend changes for the Representative’s approval when inadequacies are discovered.

9. Signs and devices may be adjusted to fit field conditions.

10. Concrete barrier details are to be according to PennDOT Standards for Roadway Construction, RC-57M, RC-59M, and PTC Standards for Roadway Construction.

11. Establish work zone speed limit of 55 MPH in all construction zones except when using tunnel cross-over traffic pattern establish work zone speed limit of 40 MPH.

Establish work zone speed limit by installing 55 MPH work zone speed limit signs on the right shoulder 1/2 mile in advance of construction area access openings and truck crossings as indicated on PTS 905-12 and 905-13.

Establish work zone speed limit of 55 MPH when a pavement differential exists between any of the lanes.

Normal posted speed limit signs within the 2 mile advanced signing area for work zones are to remain uncovered.

Cover or remove work zone speed limit signs when all normal lanes and all normal median and shoulder are available for the affected direction(s). Cover or remove work zone speed limit signs when temporary concrete barrier closes the median or shoulder.

12. Vehicles, equipment, material and workers are not to be located in the buffer zone.

13. Post the G20-2 (END ROAD WORK) sign and the normal speed limit for the area (55 MPH or 70 MPH) at the end of the work zone. If the physical work zone is followed by another physical work zone within 2 miles, then the G20-2 sign is not to be used and the R2-1 sign at the end of the first work zone is to be 55 MPH.

14. Type B light is to be mounted on the side closest to traffic as shown on PTS-980 (Sheet 30 of 32).

15. Existing R2-2-2, "WORK ZONE SPEED LIMIT 55 MPH", signs may only be used for the remainder of their serviceable life.

16. Type B yellow flashing warning lights may be used in conjunction with warning signs, unless otherwise indicated on the drawing.

17. Use only for narrow median areas less than 15 feet in width. Do not use median signs. Median width is defined as the distance between the yellow edge lines for the opposing travel lanes. Refer to PTS 900 details for median areas greater than or equal to 15 feet in width.

18. If work zone, including advance signing area, includes median widths of both less than 15 feet and greater than 15 feet, follow PTS 905 details for entire work zone.
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 2. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 905-4.

2. 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicle No. 1 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.

Shadow Vehicle No. 2

1,000' Min - 2,500' Max

JANUARY 2019
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicles No. 3 and 6. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 905-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicles No. 1 and 2.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from diving in between, based on field conditions.

7. Shadow Vehicles No. 1 and 2 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.
PTS 905-3A
Mobile Operation for 3 Lanes - Right and Center Lane Work Zone
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-3 - Notes for applicable
notes to this drawing

JANUARY 2019
1. For interchange and service plaza ramp signing within the work zone, see PTS 905-6.

2. For left lane work zone, use the same sign spacing, location, and pattern but with the signs and PCMS indicating a left lane closure.

3. Use channelizing devices with PennDOT approved sequential warning lights in the transition area for patterns used during hours of darkness.

4. Establish single lane traffic pattern only during active work periods. Shorten length of single lane pattern to only the length needed for construction operation. Work zone should not exceed four (4) miles in length.

5. Single lane should be established a minimum of 1,000 feet in advance of deceleration ramp or beyond acceleration ramp at interchanges and service plazas.

6. Install W3-5 sign only in the areas where the normal speed limit is 70 MPH.

7. Cover the Active Work Zone When Flashing (W21-19) sign and deactivate white Type B light when workers are not present on the roadway, berm, or shoulder for 60 minutes.

8. Speed Display Sign shall only be used if the length of the physical work zone is greater than or equal to 500 feet.

9. Compute the minimum desirable taper length for reduction in lanes using the following formula:

\[ L = S \times W \]

Where

- \( L \) = Minimum desirable taper length in feet
- \( W \) = Width of offset in feet
- \( S \) = Normal speed limit in miles per hour

PTS 905-6
Lane Closure Traffic Pattern for Interchange and Service Plaza Areas
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-6 - Notes for applicable
notes to this drawing

JANUARY 2019
1. All arrow panels and PCMS are to be truck mounted.

2. Have all shadow vehicles meet PennDOT and PTC requirements.

3. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 2. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use either a Stationary Shoulder Closure with Channelizing Devices as shown on PTS 905-8 or a Single Lane Traffic Pattern as shown on PTS 905-4.

4. A 7,000 lbs GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1.

5. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

**Signs**

![SHOULDER CLOSED](MPT-34)

NOTE: See Appendix A for sign descriptions and dimensions.
PTS 905-7
Mobile Shoulder Operation
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-7 - Notes for applicable notes to this drawing

JANUARY 2019
PTS 905-8 - Notes
Stationary Shoulder Closure with Channelizing Devices
Median Widths Less Than 15 Feet

1. Arrow panel in caution mode to be used when vehicles, equipment with Channelizing Devices, materials, or workers are on the paved shoulder. Channelizing devices to remain in place until work is completed. Maintain normal traffic. Stationary shoulder closure with channelizing devices only permitted during allowable working hours.

2. For median operations, use Single Lane Traffic Pattern per PTS 905-4, left lane closed. Single lane traffic pattern to remain in place until work is completed.

3. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

4. All arrow panels are to be truck mounted.

5. Have all shadow vehicles meet PennDOT and PTC requirements.

6. Cover the Active Work Zone When Flashing (W21-19) sign and deactivate white Type B light when workers are not present on the roadway, berm, or shoulder for 60 minutes.

**Notes**: See Appendix A for sign descriptions and dimensions.

PTS 905-8
Stationary Shoulder Closure with Channelizing Devices
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-8 - Notes for applicable notes to this drawing

JANUARY 2019
1. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-135 or barrier, or tapering barrier and provide temporary impact attenuator.

2. For multiple stationary shoulder closures with temporary concrete barrier located within 1 mile of each other, install advanced signing prior to the first stationary shoulder closure only, with distance displayed on the MPT-31 sign as the length from the beginning of the first stationary shoulder closure to the end of the last stationary shoulder closure. The G20-2 sign is to be installed after the last stationary shoulder closure.

3. MPT-31 sign shall only be used if the length of the work zone is greater than 1 mile.

4. If the length of the work zone is greater than 1 mile and no construction accesses are active, provide G20-5AP / R2-1 signs to the right of traffic 1,500 feet before the beginning of the temporary concrete barrier and at 1 mile intervals throughout the shoulder closure.

5. Completely cover signs used with this pattern when the right lane is closed to traffic per PTS 905-4 or PTS 905-5.

**Signs**

- G20-2: END ROAD WORK
- MPT-31: NO SHOULD NEXT _ _ _ MILES
- W20-1: ROAD WORK AHEAD
- W21-5BR: RIGHT SHOULDER CLOSED

NOTE: See Appendix A for sign descriptions and dimensions.

JANUARY 2019
PTS 905-9
Stationary Shoulder Closure with Temporary Concrete Barrier
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-9 - Notes for applicable notes to this drawing

JANUARY 2019
PTS 905-10 - Notes

Lanes Narrow
Median Widths Less Than 15 Feet

1. Use the two lane detail when \( W \leq 2.5 \) FT. and \( A < 24 \) FT. Use the three lane detail when \( W \leq 3.75 \) FT. and \( A < 36 \) FT.

2. When lanes narrow within a work zone use only W5-4-1(1,000’) and W5-4-1 (500’).

3. Provide emergency pull-offs at a spacing of approximately 1 mile each direction through work zone when full 12 feet of right shoulder is not available.

4. Taper 30:1 to outside edge of paved shoulder. From outside edge of paved shoulder, taper as per RC-57M. When lanes narrow to the right and a full taper is not feasible in median, then see Note 5.

5. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-135 or barrier, or tapering barrier and provide temporary impact attenuator.

6. From this point provide G20-5AP / R2-1 signs to the right of traffic at 2 mile maximum intervals through the narrow lane(s) pattern.

7. Erect the Active Work Zone When Flashing (W21-19) sign and activate white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not in use for 60 minutes.

8. MPT-31 sign shall only be used if the length of the work zone is greater than 1 mile.

9. Compute the minimum desirable transition / shift length for reduction in lanes using the following formula:

   \[
   L = S_{WZ} \times W
   \]

   \[
   L = \text{Minimum desirable transition/shift length in feet}
   \]

   \[
   W = \text{Width of offset in feet}
   \]

   \[

Lanes Narrow Detail - 2 Lanes Narrow (W < 2.5 FT. and A < 24 FT.)
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-10 - Notes for applicable notes to this drawing

JANUARY 2019
PTS 905-10B
Lanes Narrow Detail - 3 Lanes Narrow (W < 3.75 FT. and A < 36 FT.)
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-10 - Notes for applicable notes to this drawing
PTS 905-11 - Notes
Lanes Shift Detail
Median Widths Less Than 15 Feet

1. Use the two lane detail when $W > 2.5$ FT. or $W < 2.5$ FT. and $A = 24$ FT. Use the three lane detail when $W > 3.75$ FT. and $A = 36$ FT. Shift traffic prior to and after work zone.

2. When lanes shift to the right, replace either W1-4BL with W1-4BR or W1-4CL with W1-4CR.

3. W24-1AL and W24-1AR signs may be used in lieu of the W1-4BL and W1-4BR signs when the tangent distance for the shifted traffic makes it difficult to install a second set of two lane reverse curve signs (W1-4B series). W24-1BL and W24-1BR signs may be used in lieu of the W1-4CL and W1-4CR signs when the tangent distance for the shifted traffic makes it difficult to install a second set of three lane reverse curve signs (W1-4C series).

4. Provide emergency pull-offs at a spacing of approximately 1 mile each direction through work zone when full shoulder is not available.

5. Taper 30:1 to outside edge of paved shoulder. From outside edge of paved shoulder, taper as per RC-57M. If full taper is not feasible in median, then see Note 6.

6. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-13S or barrier, or tapering barrier to provide temporary impact attenuator.

7. From this point, provide G20-5AP / R2-1 signs to the right of traffic at 2 mile maximum intervals through the lane (s) shift pattern.

8. Erect the Active Work Zone When Flashing (W21-19) sign and activate white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not in use for 60 minutes.

9. MPT-31 sign shall only be used if the length of the work zone is greater than 1 mile.

10. Compute the minimum desirable transition / shift length for reduction in lanes using the following formula:

   \[ L = S \times W \]

   where:
   - \( L \) = Minimum desirable transition/shift length in feet
   - \( W \) = Width of offset in feet
   - \( S \) = Work Zone speed limit in miles per hour

JANUARY 2019
1. Space emergency pull-offs at approximately 1 mile each direction to the right side of traffic.

2. Emergency Pull-Off - Type II uses an existing wide area with a minimum size as indicated for Type III. Sign according to Emergency Pull-Off - Type III requirements.

3. Relocate nearest tenth mile marker to each emergency pull-off. Locate to maximize visibility for the motorist and as approved by the Representative.

4. Erect D12-14A, "EMERGENCY CELLULAR SIGN (*11)" sign within each emergency pull-off. Locate to maximize visibility for the motorist and as approved by the Representative.

5. Emergency pull-offs may be used by the contractor to access construction areas only if the emergency pull-off is unoccupied. The Commission assumes no liability for the frequency of emergency pull-off use by its customers. If emergency pull-off is used by the contractor to access construction area, see Combined Emergency Pull-Off - Type I and Opening in Temporary Concrete Barrier for Access to Construction Area detail.

6. Show the actual distance, based on field conditions, on the sign.

notes to this drawing

JANUARY 2019
1. Space emergency pull-offs at approximately 1 mile each direction.

2. Emergency Pull-Off - Type II uses an existing wide area with a minimum size as indicated for Type III. Sign according to Emergency Pull-Off - Type III requirements.

3. Relocate nearest tenth mile marker to each emergency pull-off. Locate to maximize visibility for the motorist and as approved by the Representative.

4. Erect D12-14A, "EMERGENCY CELLULAR SIGN (*11)" sign within each emergency pull-off. Locate to maximize visibility for the motorist and as approved by the Representative.

5. Emergency pull-offs may be used by the contractor to access construction areas only if the emergency pull-off is unoccupied. The Commission assumes no liability for the frequency of emergency pull-off use by its customers. If emergency pull-off is used by the contractor to access construction area, see Combined Emergency Pull-Off - Type I And Opening In Temporary Concrete Barrier For Access To Construction Area detail.

6. Show the actual distance, based on field conditions, on the sign.

7. Close construction openings with temporary concrete barrier when not required for more than two weeks. This work is incidental to the MPT.

8. Location subject to approval by Representative.

9. Station flagger at access points when access area is active. Equip flagger with PennDOT approved, like new, stop/slow paddle with entire "STOP" panel covered. Provide a platform as necessary to allow the flagger to view oncoming traffic.

10. PCMS is incidental to MPT.

11. Post G20-2 sign at the end of the final work zone.

12. When combined area is not in use for construction access for 60 minutes, place channelizing devices as shown to completely close off access to the construction area, cover W25-5, G20-2, G20-5AP/R2-1, W21-19, and W21-20, turn off Type B light, and turn off PCMS.

**Signs**

NOTE: See Appendix A for sign descriptions and dimensions.
NOTES:
See PTS 905-12D - Notes for applicable notes to this drawing
1. Close construction openings with temporary concrete barrier when not required for more than two weeks. This work is incidental to the MPT.

2. All lanes of traffic at Light Plant 1 location must be visible to flagger and unobstructed for a distance of 2,000 feet. Location subject to approval by Representative.

3. Station flagger with light plant illuminating the flagger 150 feet in advance of access points when truck crossing is active. Flagger shall be in constant communication with any vehicles using truck crossing. Equip flagger with PennDOT approved, like new, stop/slow paddle with entire "STOP" panel covered. Provide a platform as necessary to allow the flagger to view oncoming traffic.

4. PCMS is incidental to MPT.

5. Post G20-2 sign at the end of the final Work Zone.

6. Provide a light plant 2,000 feet in advance of flagger for truck crossings active during hours of darkness. Light plant shall illuminate travel lanes at this location, but shall not be directed at oncoming traffic.

   Provide a blank 48” x 48” diamond orange sign mounted on Type III barricades 2,000 feet in advance of flagger for truck crossings active during hours of daylight. Sign is to face flagger and not be visible to oncoming traffic.

   If a vehicle is between Light Plant 1 or blank sign and the crossing location, trucks are not permitted to cross the travel lanes.

7. Rock construction entrances shall be placed at both sides of the roadway as shown. Additional rock to maintain the rock construction entrances shall be stockpiled on site. Rock construction entrance not required if paved surface is present.

8. When truck crossing is not in use for 60 minutes, place channelizing devices as shown to completely close off the access points, cover MPT-36, G20-2, G20-5AP / R2-1, W21-19, and W21-20 turn off Type B light, and turn off PCMS.

9. Truck crossings to be active only during allowable working hours and during satisfactory weather conditions as determined by the Representative. Truck crossings are not permitted to be active during holiday periods.

**Signs**

- **G20-5AP/ R2-1**
- **MPT-36**
- **W21-19**
- **G20-2**
- **W21-20**

NOTE: See Appendix A for sign descriptions and dimensions.
PTS 905-13
Opening in Temporary Concrete Barrier with Truck Crossing
Median Widths Less Than 15 Feet

NOTES:
See PTS 905-13 - Notes for applicable notes to this drawing
1. For left lane work zone, use the same sign spacing, location, and pattern but with the signs and PCMS indicating a left lane closure.

2. Provide emergency pull-offs at a spacing of approximately 1 mile each direction through work zone when full right shoulder is not available.

3. Remove conflicting white line between the center lane and right lane for a right lane closure or the left lane and center lane for a left lane closure.

4. Taper 30:1 to outside edge of paved shoulder. From outside edge of paved shoulder, taper as per RC-57M.

5. Provide proper end treatment for barrier by tapering barrier and burying, tapering barrier and connecting to guide rail per PTS-135 or barrier, or tapering barrier and providing temporary impact attenuator.

6. From this point, provide G20-5AP / R2-1 signs to the right of traffic at 2 mile maximum intervals through the long-term lane closure pattern.

7. Erect the Active Work Zone When Flashing (W21-19) sign and active white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not in use for 60 minutes.

**Signs**

NOTE: See Appendix A for sign descriptions and dimensions.

R = Runout
PTS 905-15 - Notes
Crossover Traffic Pattern
Median Widths Less Than 15 Feet

1. Provide sufficient Type III barricades to close off the entire road.

2. Provide proper end treatment for barrier, by tapering barrier and burying, tapering barrier and connect to guide rail per PTS-135 or barrier, or tapering barrier and provide temporary impact attenuator.

3. Use channelizing devices with PennDOT approved sequential warning lights in the transition areas for patterns used during hours of darkness.

4. Single lane should be established a minimum of 1,000 feet in advance of deceleration ramp or beyond acceleration ramp at interchanges and service plazas.

5. For interchanges and service plaza ramp signing within work zone, see PTS 905-6.

6. From this point, provide G20-5AP/ R2-1 signs to the right of traffic at 2 mile maximum intervals through the crossover traffic pattern.

7. Erect the Active Work Zone When Flashing (W21-19) sign and activate white Type B light when construction access areas are active. Sign shall be covered and light shall be deactivated when construction access is not used for 60 minutes.

8. Compute the minimum desirable transition / shift length for reduction in lanes using the following formula:

\[
L_1 = S \times W \\
L_2 = S_{WZ} \times W \\
L = \text{Minimum desirable transition/shift length in feet} \\
W = \text{Width of offset in feet} \\
S = \text{Normal speed limit in miles per hour} \\
S_{WZ} = \text{Work Zone speed limit in miles per hour}
\]

January 2019
Standards for Short-Term Median Widths Greater Than or Equal to 15 Feet

(PTS 910 Series)
1. Remove all traffic control signs and devices immediately upon the completion of the work unless otherwise specified in the special provisions.

2. Place all traffic control devices and have them inspected by the Representative before work begins.

3. Cover or remove from the site all signs not in use. Remove from the Turnpike right-of-way construction signs not needed or used for a period of two (2) or more weeks.

4. Maintain a minimum spacing of 200 feet between all regulatory, warning and destination signs.

5. Provide at minimum a 40 feet width beyond the edge of the travel lane free of obstacles and drop-offs greater than 2 inches in depth in work zone(s) during non-working hours or separate work zone(s) from motorists with temporary concrete barrier. Separation of work zone(s) is incidental to the MPT.

6. Details for the signs and devices can be found in these drawings, PennDOT Publication 236, PennDOT Publication 212 and are to be manufactured by a Department of Transportation approved manufacturer as listed in PennDOT Publication 35.

7. Use PennDOT approved Type XI reflectorized material for signs. Do not use metal or wood signs in median.

8. These plans are not intended to relieve the contractor of the responsibility for the protection of the public and the construction personnel. The standards prescribed are minimum and additional protection may be needed if problems are encountered during the term of the contract. The contractor will be expected to constantly review this plan for adequacy and to recommend changes for the Representative’s approval when inadequacies are discovered.

9. Signs and devices may be adjusted to fit field conditions.

10. Concrete barrier details are to be according to PennDOT Standards for Roadway Construction, RC-57M, RC-59M, and PTC Standards for Roadway Construction.

11. Establish work zone speed limit of 55 MPH in all construction zones.

Establish work zone speed limit of 55 MPH when a pavement differential exists between any of the lanes.

Normal posted speed limit signs within 2 mile advanced signing area for work zones are to remain uncovered.

Cover or remove work zone speed limit signs when all normal lanes and all normal median and shoulder are available for the affected direction(s).

12. Vehicles, equipment, material, and workers are not to be located in the buffer zone.

13. Post the G20-2 (END ROAD WORK) sign at the end of the work zone. If the physical work zone is followed by another physical work zone within 2 miles, then the G20-2 sign is not to be used at the end of the first work zone.

14. Type B light is to be mounted on the side closest to traffic as shown on PTS 980 (Sheet 30 of 32).

15. Existing R2-2-2, "WORK ZONE SPEED LIMIT 55 MPH", signs may only be used for the remainder of their serviceable life.

16. Type B yellow flashing lights may be used in conjunction with warning signs unless otherwise indicated on the drawings.

17. Channelizing devices may be temporarily relocated to the minimum offset to allow for work to be performed, as directed by the Representative. The channelizing devices must remain between traffic and the work zone. Relocate channelizing devices to original position as work progresses.

18. Install, reset, relocate, and remove any permanent and / or temporary concrete barrier so that no blunt end of the barrier is exposed to oncoming traffic.

19. Except for MPT-09, MPT-10, and MPT-11, all other signs may be mounted on PennDOT approved portable supports, x-frame, with a minimum height of 1 foot from the pavement surface to the bottom of the signs. Portable supports and signs must be removed from the roadway during non-working hours.

20. Median width is defined as the distance between the yellow edge lines for the opposing travel lanes. Refer to PTS 915 details for narrow median areas less than 15 feet in width.

21. If work zone, including advance signing area, includes median widths of both less than 15 feet and greater than 15 feet, follow PTS 915 details for entire work zone.

JANUARY 2019
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 2. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 910-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicle No. 1 may be located on the median shoulder where the median width is a minimum of 12 feet.
PTS 910-2A
Mobile Operation for 2 Lanes - Right Lane and Shoulder Work Zone
Median Widths Greater Than or Equal to 15 Feet

NOTES:

JANUARY 2019
PTS 910-2B
Mobile Operation for 2 Lanes - Left Lane and Part Median Work Zone
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-2 - Notes for applicable notes to this drawing

JANUARY 2019
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicles No. 3 and 6. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 910-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicles No. 1 and 2.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicles No. 1 and 2 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.
PTS 910-3A
Mobile Operation for 3 Lanes - Right and Center Lane Work Zone
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-3 - Notes for applicable notes to this drawing

JANUARY 2019
PTS 910-3B
Mobile Operation for 3 Lanes - Left and Center Lane Work Zone
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-3 - Notes for applicable
notes to this drawing

JANUARY 2019
PTS 910-4 - Notes
Median Widths Greater Than or Equal to 15 Feet

1. This pattern is to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

2. For interchange and service plaza ramp signing within the work zone, see PTS 910-6.

3. For left lane work zone use the same sign spacing, location, and pattern but with the signs and PCMS indicating a left lane closure.

4. Use channelizing devices with PennDOT approved sequential warning lights in the transition areas for patterns used during hours of darkness.

5. Establish single lane traffic pattern only during active work periods. Shorten length of single lane pattern to only the length needed for the construction operation. Work zone should not exceed three (3) miles in length, unless approved by the Representative.

6. Single lane should be established a minimum of 1000 feet in advance of deceleration ramp or beyond acceleration ramp at interchanges and service plazas, or as directed by the Representative.

7. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

8. Speed Display Sign shall only be used if the length of the physical work zone is greater than or equal to 500 feet.

10. During high traffic volume periods and as directed by the Representative, change the message on PCMS 1 to read: Phase 1 "RIGHT / LANE / CLOSED", Phase 2 "USE / BOTH / LANES".

11. Existing W20-5R / W20-5L signs may only be used for remainder or their servicable life.

12. Compute the minimum desirable taper length for reduction in lanes using the following formula:

\[ L = S \times W \]

Where
- \( L \) = Minimum desirable taper length in feet
- \( W \) = Width of offset in feet
- \( S \) = Normal speed limit in miles per hour

Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-4 - Notes for applicable notes to this drawing

JANUARY 2019
1. This pattern is to be used for short term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

2. For interchange and service plaza ramp signing within the work zone, see PTS 910-6.

3. For left and center lane work zone, use the same spacing, location, and pattern but with the signs and PCMS indicating a left and center lane closure.

4. Use channelizing devices with PennDOT approved sequential warning lights in the transition areas for patterns used during hours of darkness.

5. Establish single lane pattern only during active work periods. Shorten length of single lane pattern to only the length needed for the construction operation. Work zone should not exceed three (3) miles in length, unless approved by the Representative.

6. Single lane should be established a minimum of 1,000 feet in advance of deceleration ramp or beyond acceleration ramp at interchanges and service plazas, or as directed by the Representative.

7. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

8. Speed Display Sign shall only be used if the length of the physical work zone is greater than or equal to 500 feet.

10. During high traffic volume periods and as directed by the Representative, change the message on PCMS 1 to read: Phase 1 “RIGHT / 2 LANES / CLOSED”, Phase 2 “USE / ALL / LANES”.

11. Existing W20-5AR / W20-5AL signs may only be used for remainder of their serviceable life.

12. Compute the minimum desirable taper length for reduction in lanes using the following formula:

   \[ L = \frac{SW}{1000} \]

   Where
   
   \( L \) = Minimum desirable taper length in feet
   \( W \) = Width of offset in feet
   \( S \) = Normal speed limit in miles per hour

1. All arrow panels and PCMS are to be truck mounted.

2. Have all shadow vehicles meet PennDOT and PTC requirements.

3. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 2. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, either use a Stationary Shoulder Closure with Channelizing Devices as shown on PTS 910-7 or use a Single Lane Traffic Pattern as shown on PTS 910-4.

4. Mobile shoulder operations may be used on the median shoulder where the median shoulder width is a minimum of 12 feet.

5. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1.

6. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

7. Shoulder Closed Sign (MPT-34) not required for PTC Maintenance Operations.

**Signs**

MPT-34

NOTE: See Appendix A for sign descriptions and dimensions.
PTS 910-7
Mobile Shoulder Operations
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-7 - Notes for applicable notes to this drawing

JANUARY 2019
1. Arrow panel in caution mode to be used when vehicles, equipment, materials, or workers are working on the paved shoulder. Channelizing devices to remain in place until work is completed. Maintain normal traffic.

2. For median operations where the median shoulder is less than 12 feet wide, use Single Lane Traffic Pattern, per PTS 910-4, left lane closed. Single lane traffic pattern to remain in place until work is completed.

3. For left shoulder work zone in wide median areas use the same sign spacing, location, and pattern but with the signs indicating a left shoulder closure. Install signs in the median and right shoulder.

4. This pattern is to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

5. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

6. All arrow panels are to be truck mounted.

7. Have all shadow vehicles meet PennDOT and PTC requirements.

**Signs**

PTS 910-8
Stationary Shoulder Closure with Channelizing Devices
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-8 - Notes for applicable notes to this drawing

JANUARY 2019
1. Vehicles, equipment, material and workers are not to be located in the buffer zone.

2. The figure applies when the survey work is a minimum of 15 minutes.

3. The survey work on shoulder operation may be used on the median shoulder where the median shoulder width is a minimum of 12 feet.

4. For any survey operation where workers are within two (2) feet of any travel lane, use Single Lane Traffic Pattern per PTS 910-4 if median is greater than or equal to 15 feet in width, or PTS 915-4 if median is less than 15 feet in width. Single lane traffic pattern to remain in place until all work within two (2) feet of the travel lanes is complete. Single lane traffic pattern only permitted during provided allowable working hours.

5. This pattern to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

6. Signs shall be mounted on PennDOT approved portable sign supports, X-frame, with a minimum height of 1 foot from the pavement surface to the bottom of the signs. Portable supports and signs must be removed from the roadway during non-working hours.

**Signs**

- G20-2
- W21-6

PTS 910-9
Survey Work Along Shoulder
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-9 - Notes for applicable
notes to this drawing

JANUARY 2019
1. Vehicles, equipment, material and workers are not to be located in the buffer zone.

2. The utility work on shoulder operation may be used on the median shoulder where the median shoulder width is a minimum of 12 feet.

3. Arrow panel in caution mode to be used when vehicles, equipment, material or workers are working on the paved shoulder. PennDOT approved 28" traffic cones to remain in place until work is complete. Maintain normal traffic.

4. For any utility operation where the physical work zone is on the paved shoulder, use Stationary Shoulder Closure with Channelizing Devices per PTS 910-8, if median is greater than or equal to 15 feet in width, PTS 915-8 if median width is less than 15 feet in width. Stationary Shoulder Closure with Channelizing Devices to remain in place until physical work on the paved shoulder is complete. Stationary shoulder closure with channelizing devices only permitted during provided allowable working hours.

5. This pattern to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

6. All arrow panels are to be truck mounted.

7. Have all shadow vehicles meet PennDOT and PTC requirements.

8. Signs shall be mounted on PennDOT approved portable sign supports, X-frame, with a minimum height of 1 foot from the pavement surface to the bottom of the signs. Portable supports and signs must be removed from the roadway during non-working hours.

**Signs**

G20-2

UTILITY WORK AHEAD

W21-7

NOTE: See Appendix A for sign descriptions and dimensions.
PTS 910-10
Utility Work Along Shoulder
Median Widths Greater Than or Equal to 15 Feet

NOTES:
See PTS 910-10 - Notes for applicable
notes to this drawing

JANUARY 2019
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 3. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 910-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck and loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1 and 2.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicles No. 1 and 2 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.

8. Shadow Vehicles No. 3, No. 4 and No. 5 must be a single axle or tandem axle dump truck or a stake body truck. Light duty dump and light duty stake bodies are not permitted to be used as Shadow Vehicles No. 3, No. 4, and No. 5.

9. Paint Foreman’s vehicle may be located:
   A. In front of the supply vehicle, or
   B. Behind the supply vehicle, or
   C. As a temporary replacement for Shadow Vehicle No. 2.

10. State Police vehicle may be located:
    A. In front of Shadow Vehicle No. 4, or
    B. Behind Shadow Vehicle No. 4.

11. All vehicles, with exception of State Police vehicle, are to have an activated amber warning light.

JANUARY 2019
Standards for Short-Term Median Widths Less Than 15 Feet
(PTS 915 Series)
1. Remove all traffic control signs and devices immediately upon the completion of the work unless otherwise specified in the special provisions.

2. Place all traffic control devices and have them inspected by the Representative before work begins.

3. Cover or remove from the site all signs not in use. Remove from the Turnpike right-of-way construction signs not needed or used for a period of two (2) or more weeks.

4. Maintain a minimum spacing of 200 feet between all regulatory, warning and destination signs.

5. Provide at minimum a 40 feet width beyond the edge of the travel lane free of obstacles and drop-offs greater than 2 inches in depth in work zone(s) during non-working hours or separate work zone(s) from motorists with temporary concrete barrier. Separation of work zone(s) is incidental to the MPT.

6. Details for the signs and devices can be found in these drawings, PennDOT Publication 236, PennDOT Publication 212 and are to be manufactured by a Department of Transportation approved manufacturer as listed in PennDOT Publication 35.

7. Use PennDOT approved Type XI reflectorized material for signs.

8. These plans are not intended to relieve the contractor of the responsibility for the protection of the public and the construction personnel. The standards prescribed are minimum and additional protection may be needed if problems are encountered during the term of the contract. The contractor will be expected to constantly review this plan for adequacy and to recommend changes for the Representative's approval when inadequacies are discovered.

9. Signs and devices may be adjusted to fit field conditions.

10. Concrete barrier details are to be according to PennDOT Standards for Roadway Construction, RC-57M, RC-59M, and PTC Standards for Roadway Construction.

11. Establish work zone speed limit of 55 MPH in all construction zones except when using tunnel crossover traffic pattern established work zone speed limit of 40 MPH.

Establish work zone speed limit of 55 MPH when a pavement differential exists between any of the lanes.

Normal posted speed limit signs within 2 mile advanced signing area for work zones are to remain uncovered.

Cover or remove work zone speed limit signs when all normal lanes and all normal median and shoulder are available for the affected direction(s).

12. Vehicles, equipment, material, and workers are not to be located in the buffer zone.

13. Post the G20-2 (END ROAD WORK) sign at the end of the work zone. If the physical work zone is followed by another physical work zone within 2 miles, then the G20-2 sign is not to be used at the end of the first work zone.

14. Type B light is to be mounted on the side closest to traffic as shown on PTS 980 (Sheet 30 of 32).

15. Existing R2-2-2, "WORK ZONE SPEED LIMIT 55 MPH", signs may only be used for the remainder of their serviceable life.

16. Type B yellow flashing lights may be used in conjunction with warning signs, unless otherwise indicated on the drawing.

17. Channelizing devices may be temporarily relocated to the minimum offset to allow for work to be performed, as directed by the Representative. The channelizing devices must remain between traffic and the work zone. Relocate channelizing devices to original position as work progresses.

18. Install, reset, relocate, and remove any permanent and / or temporary concrete barrier so that no blunt end of the barrier is exposed to oncoming traffic.

19. Except for MPT-09, MPT-10, and MPT-11, all other signs may be mounted on PennDOT approved portable supports, x-frame, with a minimum height of 1 foot from the pavement surface to the bottom of the signs. Portable supports and signs must be removed from the roadway during non-working hours.

20. Use only for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

21. Use only for narrow medians less than 15 feet in width. Do not use median signs. Median width is defined as the distance between the yellow edge lines for the opposing travel lanes. Refer to PTS 910 details for median areas greater than or equal to 15 feet in width.

22. If work zone, including advance signing area, includes median widths of both less than 15 feet and greater than 15 feet, follow PTS 915 details for entire work zone.
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 2. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 915-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicle No. 1 may be located on the median shoulder where the median width is a minimum of 12 feet.
PTS 915-2A
Mobile Operation for 2 Lanes - Right Lane and Shoulder Work Zone
Median Widths Less Than 15 Feet

NOTES:
See PTS 915-2 - Notes for applicable
notes to this drawing

JANUARY 2019
PTS 915-2B
Mobile Operation for 2 Lanes - Left Lane and Median Work Zone
Median Widths Less Than 15 Feet

---

NOTES:
See PTS 915-2 - Notes for applicable notes to this drawing

JANUARY 2019
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicles No. 3 and 6. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a Single Lane Traffic Pattern as shown on PTS 915-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicles No. 1 and 2.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicles No. 1 and 2 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.
PTS 915-3A
Mobile Operation For 3 Lanes - Right and Center Lane Work Zone
Median Widths Less Than 15 Feet

NOTES:
See PTS 915-3 - Notes for applicable
notes to this drawing

JANUARY 2019
PTS 915-3B
Mobile Operation for 3 Lanes - Left and Center Lane Work Zone
Median Widths Less Than 15 Feet

NOTES:
See PTS 915-3 - Notes for applicable
notes to this drawing

JANUARY 2019
1. For interchange and service plaza ramp signing within the work zone, see PTS 915-6.

2. For left lane work zone use the same sign spacing, location, and pattern but with the signs and PCMS indicating a left lane closure.

3. Use channelizing devices with PennDOT approved sequential warning lights in the transition areas for patterns used during hours of darkness.

4. Establish single lane traffic pattern only during active work periods. Shorten length of single lane pattern to only the length needed for the construction operation. Work zone should not exceed three (3) miles in length, unless approved by the Representative.

5. Single lane should be established a minimum of 1,000 feet in advance of deceleration ramp or beyond acceleration ramp at interchanges and service plazas, or as directed by the Representative.

6. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

7. This pattern is to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

8. Speed Display Sign shall only be used if the length of the physical work zone is greater than or equal to 500 feet.

10. During high traffic volume periods and as directed by the Representative, change the message on the PCMS to read: PCMS 1 - Phase 1 “USE / BOTH / LANES”, Phase 2 “TO / MERGE / POINT”; PCMS 2 - Phase 1 “RIGHT/ LANE / CLOSED”, Phase 2 “USE / BOTH/ LANES”; PCMS 3 - Phase 1 “RIGHT / LANE / CLOSED”, Phase 2 “MERGE / LEFT / 1500 FT”.

11. Existing W20-5R / W20-5L signs may only be used for remainder of their serviceable life.

12. Compute the minimum desirable taper length for reduction in lanes using the following formula:
   \[ L = S \times W \]
   Where  
   \( L \) = Minimum desirable taper length in feet  
   \( W \) = Width of offset in feet  
   \( S \) = Normal speed limit in miles per hour

1. This pattern is to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

2. All arrow panels and PCMS are to be truck mounted.

3. Have all shadow vehicles meet PennDOT and PTC requirements.

4. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 2. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, either use a Stationary Shoulder Closure with Channelizing Devices as shown on PTS 915-8 or use a Single Lane Traffic Pattern, as shown on PTS 915-4.

5. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1.

6. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

7. Shoulder Closed Sign (MPT-34) not required for PTC Maintenance Operations.

**Signs**

![Shoulder Closed](MPT-34)

NOTE: See Appendix A for sign descriptions and dimensions.
PTS 915-7
Mobile Shoulder Operations
Median Widths Less Than 15 Feet

NOTES:
See PTS 915-7 - Notes for applicable notes to this drawing
1. Arrow panel in caution mode to be used when workers, vehicles, equipment, and materials are working on the paved shoulder. Channelizing devices to remain in place until work is completed. Maintain normal lane traffic. Stationary shoulder closure with channelizing devices only permitted during allowable working hours.

2. For median operations where the median shoulder is less than 12 feet wide use Single Lane Traffic Pattern, per PTS 915-4, left lane closed. Single lane traffic pattern to remain in place until work is completed.

3. This pattern is to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

4. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

5. All arrow panels are to be truck mounted.

6. Have all shadow vehicles meet PennDOT and Pennsylvania Turnpike Commission requirements.

7. This detail to only be used in areas where the median width is less than 15 feet.

### Signs

- **G20-2**: End Road Work
- **W3-5**: 55 Speed Limit
- **W20-1**: Road Work Ahead
- **W21-5BR or W21-5BL**: Right Shoulder Closed

**NOTE**: See Appendix A for sign descriptions and dimensions.

PTS 915-8
Stationary Shoulder Closure with Channelizing Devices
Median Widths Less Than 15 Feet

JANUARY 2019

NOTES:
See PTS 915-8 - Notes for applicable notes to this drawing

SEE NOTE 4
1. Vehicles, equipment, material and workers are not to be located in the buffer zone.

2. The figure applies when the survey work is a minimum of 15 minutes.

3. The survey work on shoulder operation may be used on the median shoulder where the median shoulder width is a minimum of 12 feet.

4. For any survey operation where workers are within two (2) feet of any travel lane, use Single Lane Traffic Pattern per PTS 910-4 if median is greater than or equal to 15 feet in width, or PTS 915-4 if median is less than 15 feet in width. Single lane traffic pattern to remain in place until all work within two (2) feet of the travel lanes is complete. Single lane traffic pattern only permitted during provided allowable working hours.

5. Signs shall be mounted on PennDOT approved portable sign supports, X-frame, with a minimum height of 1 foot from the pavement surface to the bottom of the signs. Portable supports and signs must be removed from the roadway during non-working hours.

**Signs**

NOTE: See Appendix A for sign descriptions and dimensions.
PTS 915-9
Survey Work Along Shoulder
Median Widths Less Than 15 Feet

NOTES:
See PTS 915-9 - Notes for applicable notes to this drawing

JANUARY 2019
1. Vehicles, equipment, material and workers are not to be located in the buffer zone.

2. The utility work on shoulder operation may be used on the median shoulder where the median shoulder width is a minimum of 12 feet.

3. Arrow panel in caution mode to be used when vehicles, equipment, material or workers are working on the paved shoulder. PennDOT approved 28" traffic cones to remain in place until work is complete. Maintain normal traffic.

4. For any utility operation where the physical work zone is on the paved shoulder, use Stationary Shoulder Closure with Channelizing Devices per PTS 910-8, if median is greater than or equal to 15 feet in width, PTS 915-8 if median width is less than 15 feet in width. Stationary Shoulder Closure with Channelizing Devices to remain in place until physical work on the paved shoulder is complete. Stationary shoulder closure with channelizing devices only permitted during provided allowable working hours.

5. This pattern to be used for short-term operations which occupy a location for less than 12 hours for three (3) or less consecutive days.

6. All arrow panels are to be truck mounted.

7. Have all shadow vehicles meet PennDOT and PTC requirements.

8. Signs shall be mounted on PennDOT approved portable sign supports, X-frame, with a minimum height of 1 foot from the pavement surface to the bottom of the signs. Portable supports and signs must be removed from the roadway during non-working hours.

Shadow Vehicle No. 1

NOTES:
See PTS 915-10 - Notes for applicable notes to this drawing

JANUARY 2019
1. This figure applies where the operation moves intermittently or continuously at an average speed of more than 1 MPH (88 FT./MIN.). The operator is to be the only occupant of Shadow Vehicle No. 3. When the operation moves intermittently, the maximum time of stationary work is 15 minutes. If these conditions cannot be met, use a single lane traffic pattern as shown on PTS 910-4.

2. A 7,000 lb GVW (Gross Vehicle Weight) or larger pickup truck and loaded to weigh a minimum of 5,500 lbs may be used as Shadow Vehicle No. 1 and 2.

3. Position Shadow Vehicle No. 1 so that it is visible from behind for a minimum distance of 700 feet.

4. Have all shadow vehicles meet PennDOT and PTC requirements.

5. All arrow panels and PCMS are to be truck mounted.

6. The spacing between the work vehicles and the shadow vehicles, and between each shadow vehicle should be minimized to deter road users from driving in between, based on field conditions.

7. Shadow Vehicles No. 1 and 2 may be located on the median shoulder where the median shoulder width is a minimum of 12 feet.

8. Shadow Vehicles No. 3, No. 4 and No. 5 must be a single axle or tandem axle dump truck or a stake body truck. Light duty dump and light duty stake bodies are not permitted to be used as Shadow Vehicles No. 3, No. 4, and No. 5.

9. Paint Foreman’s vehicle may be located:
   A. In front of the supply vehicle, or
   B. Behind the supply vehicle, or
   C. As a temporary replacement for Shadow Vehicle No. 2.

10. State Police vehicle may be located:
    A. In front of Shadow Vehicle No. 4, or
    B. Behind Shadow Vehicle No. 4.

11. All vehicles, with exception of State Police vehicle, are to have an activated amber warning light.
PTS 915-11A
Traffic Line Painting Operation - Right Lane
Median Widths Less Than 15 Feet

NOTES:
See PTS 915-11 - Notes for applicable notes to this drawing

JANUARY 2019
PTS 915-11B
Traffic Line Painting Operation - Left Lane
Median Widths Less Than 15 Feet

NOTES:
See PTS 915-11 - Notes for applicable notes to this drawing

JANUARY 2019
1. Provide sufficient Type III barricades to close off the entire road.

2. Use existing "DO NOT CROSS CENTER LINE" sign and existing traffic control signal at portal.

3. Westbound approach to Allegheny Tunnel requires left or right and center lane closure as indicated on PTS 915-5.

4. Use channelizing devices with PennDOT approved sequential warning lights in the transition areas for patterns used during hours of darkness.

5. Speed Display Sign not required for PTC Maintenance Operations.

6. During high traffic volume periods and as directed by the Representative, change the message on the PCMS to read: PCMS 1 and 8 - Phase 1 "USE / BOTH / LANES", Phase 2 "TO / MERGE / POINT"; PCMS 2 - Phase 1 "RIGHT / LANE / CLOSED", Phase 2 "USE / BOTH / LANES"; PCMS 3 - Phase 1 "RIGHT / LANE / CLOSED", Phase 2 "MERGE / LEFT / 1500 FT"; PCMS 7 - Phase 1 "LEFT / LANE / CLOSED", Phase 2 "USE / BOTH / LANES"; PCMS 6 - Phase 1 "LEFT / LANE / CLOSED", Phase 2 "MERGE / RIGHT / 1500 FT".

7. Existing W20-5R / W20-5L signs may only be used for remainder of their serviceable life.

NOTES:
See PTS 915-12 - Notes for applicable notes to this drawing
Standards for Interchange Operations
(PTS 940 Series)
1. Remove all traffic control signs and devices immediately upon the completion of the work unless otherwise specified in the special provisions.

2. Place all traffic control devices and have them inspected by the Representative before work begins.

3. Median areas less than 15 feet in width do not use median signs. Median width is defined as the distance between the yellow edge lines for the opposing travel lanes.

4. Cover or remove from the site all signs not in use. Remove from the Turnpike right-of-way construction signs not needed or used for a period of two (2) or more weeks.

5. Maintain a minimum spacing of 200 feet between all regulatory, warning and destination signs.

6. Provide at minimum a 40 feet width beyond the edge of the travel lane free of obstacles and drop-offs greater than 2 inches in depth in work zone(s) during non-working hours or separate work zone(s) from motorists with temporary concrete barrier. Separation of work zone(s) is incidental to the MPT.

7. Details for the signs and devices can be found in these plans, PennDOT Publication 236, PennDOT Publication 212 and are to be manufactured by a Department of Transportation approved manufacturer as listed in PennDOT Publication 35.

8. Use PennDOT approved Type XI reflectorized material for signs. Do not use metal or wood signs in median.

9. These plans are not intended to relieve the contractor of the responsibility for the protection of the public and the construction personnel. The standards prescribed are minimum and additional protection may be needed if problems are encountered during the term of the contract. The contractor will be expected to constantly review this plan for adequacy and to recommend changes for the Representative's approval when inadequacies are discovered.

10. Compute the minimum desirable taper length for reduction in lanes on ramps using the following formula:

\[ L = \frac{W \times S}{60} \]

Where:
- \( L \) = Minimum desirable taper length in feet
- \( W \) = Width of offset in feet
- \( S \) = Normal speed in miles per hour

11. Signs and devices may be adjusted to fit field conditions.

12. Concrete barrier details are to be according to PennDOT Standards for Roadway Construction, RC-57M, RC-59M, and PTC Standards for Roadway Construction.

13. Vehicles, equipment, material and workers are not to be located in the buffer zone.

14. Type B light is to be mounted on the side closest to traffic as shown on PTS 980 (Sheet 30 of 32).

15. Type B Yellow flashing warning lights maybe used in conjunction with warning signs unless otherwise indicated on the drawings.

16. Channelizing devices may be temporarily relocated to the minimum offset to allow for work to be performed, as directed by the Representative. The channelizing devices must remain between traffic and the work zone. Relocate channelizing devices to original position as work progresses.

17. Install, reset, relocate, remove any permanent and / or temporary concrete barrier so that no blunt end of the barrier is exposed to oncoming traffic.

18. Except for MPT-09, MPT-10, MPT-11, and R22-1 signs, all other signs may be mounted on PennDOT approved portable supports, x-frame, with a minimum height of 1 foot from the pavement surface to the bottom of the signs. Portable supports and signs must be removed from the roadway during non-working hours.

19. If Express E-ZPass closure work zone includes median widths of both less than 15 feet and greater than 15 feet, follow PTS 940-14 for entire work zone.
1. This pattern to be used for short-term operations which occupy a location for less than 8 hours.

2. Overhead lane control to display red signal and "Lane Closed" white on red background, if available.

3. Place channelizing devices at 10 feet apart across parking access.

4. Sign locations may be adjusted to fit field conditions.

5. All channelizing devices spaces at 10 feet unless otherwise noted.

**Signs**

![PTC-LC](LANE CLOSED)

3. In locations where permanent DMS are available, display message as shown in Note 2.

4. Use channelizing devices with PennDOT approved sequential warning lights in the transition area for patterns used during hours of darkness.

5. Compute the minimum desirable taper length for reduction in lanes on mainline using the following formula:

   \[ L = S \times W \]

   Where  
   \( L \) = Minimum desirable taper length in feet  
   \( W \) = Width of offset in feet  
   \( S \) = Normal speed limit in miles per hour

6. Single lane should be established a minimum of 1,000 feet in advance or beyond ramps at interchanges and service plazas.

7. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

8. Median areas less than 15 feet in width do not use median signs. Refer to PTS 940-14.

10. Post G20-2 sign 500 feet from the end of the work zone.

PTS 940-13A
Express E-ZPass Single Lane Closure

NOTES:
See PTS 940-13 - Notes for applicable notes to this drawing

JANUARY 2019
NOTES:
See PTS 940-13 - Notes for applicable notes to this drawing

JANUARY 2019
1. Use only for narrow medians less than 15 feet in width. Do not use median signs.

2. If distances for first shoulder transition, merge transition and buffer zone exceed development of additional express lane, extend buffer zone to express lane diverge taper. Provide arrow board only at transition area.

3. Place additional PCMS at existing Express E-ZPass locations with the following message:

   Express  Keep
   E-ZPass  Right
   Closed

4. In locations where permanent DMS are available, display message as shown in Note 2.

5. Use channelizing devices with PennDOT approved sequential warning lights in the transition area for patterns used during hours of darkness.

6. Compute the minimum desirable taper length for reduction in lanes on mainline using the following formula:

   \[ L = S \times W \]

   Where  
   \( L \) = Minimum desirable taper length in feet  
   \( W \) = Width of offset in feet  
   \( S \) = Normal speed limit in miles per hour

7. Single lane should be established a minimum of 1,000 feet in advance or beyond ramps at interchanges and service plazas.

8. Install W3-5 sign only in areas where the normal speed limit is 70 MPH.

10. Post G20-2 sign 500 feet from the end of the work zone
